4. Business service fee

Business service fee (VAT 0 %)	
Business service fee (per contract)	1,20 €/t
Fee minimum	100,00 €/contract/year
Fee maximum	4 500,00 €/contract/year
Business service fee, hybrid customer (a hybrid customer is a customer of Sumi for plastic and of SPT for other materials)	1,20 €/t
Fee minimum	100,00 €/contract/year
Fee maximum	4 500,00 €/contract/year

5. Late declaration fee

Late declaration fee	
Amount of fee if packaging data is..	% business service fee
reported in March	15
reported in April	30
reported 1.5. or later	50

If a company reports 2023 packaging data after 29.2.2024, the company will be invoiced a late declaration fee.

If the company has not submitted the 2023 packaging data by the end of May 2024, RINKI Ltd invoices, in addition to the late declaration fee, also an estimate based business service fee and recycling fees, based on the packaging data available to RINKI Ltd.

Note. Hybrid customers are invoiced business service fees for both SPT and Sumi based on the tonnes belonging to the respective PROs.

6. Registration fee*

Registration fee* (VAT 0 %)	
Registration fee, single contract	0,00 €
Registration fee, joint contract	
Signatory company	0,00 €
Associated company	0,00 €

* Invoiced when new customer joins

7. Billing

Payment term	14 days
Late payment interest	According to Interest Act

Division of invoice

If the material group-specific recycling fee of a company exceeds 10 000 euros, it will be invoiced in two equal instalments so that the latter falls due 120 days from the date of the invoice, but not later than 31.10.

Estimate-based invoicing

An estimate-based invoice is sent to customers who have not declared packaging data according to the terms of contract. The customer is still required to declare the actual packaging data, on the basis of which the estimate-based invoice will be corrected.

Comments on the price list for paper fibre packaging

- Eco-modulation i.e. differentiated pricing required by the Waste Act is implemented for the first for paper fibre packaging. Eco-modulation encourages businesses to develop packaging that is better recyclable. Materials in price classes A-C are grouped according to eco-modulation.
- The pricing of consumer and B2B packaging is differentiated according to the “polluter-pays” principle, which differs from previous years. The collection and processing costs of consumer packaging are high, whereas businesses organise their waste management independently.
- From July 2023 the producers are responsible for the costs of residential waste collection organised by municipalities for residences of at least five households and this approximately doubles the collection costs of consumer packaging waste. There are some 2,7 million inhabitants covered by residential waste collection.

Comments on the price list for plastic packaging

- Eco-modulation i.e. differentiated pricing required by the Waste Act is implemented for plastic packaging. Eco-modulation encourages businesses to develop packaging that is better recyclable. Plastic packaging fractions are grouped according to eco-modulation in the price classes.
- SPT has been able to lower the cost level of plastic packaging and thus also the recycling fees significantly from last year. The majority of SPT's customers' plastic packaging waste is recycled in the world's biggest new Site Zero plant in Motala owned by Swedish Plastic recycling (SPÅ). The high sorting efficiency minimizes the need for energy utilisation i.e. incineration.
- From July 2023 the producers are responsible for the costs of residential waste collection organised by municipalities for residences of at least five households and this increases the collection costs of consumer packaging, but more moderately than for paper fibre packaging. There are some 2,7 million inhabitants covered by residential waste collection.

Comments of the price list for metal packaging

- Eco-modulation i.e. differentiated pricing required by the Waste Act is implemented for the first for metal packaging. Eco-modulation encourages businesses to develop packaging that is better recyclable. Materials in price classes A-C are grouped according to eco-modulation.
- From July 2023 the producers are responsible for the costs of residential waste collection organised by municipalities for residences of at least five households and this increases the collection costs of consumer packaging, but in classes A and B which are biggest volume wise the price level has been lowered because of SPT's own operations. There are some 2,7 million inhabitants covered by residential waste collection.

Comments on the price list for glass packaging

- Eco-modulation i.e. differentiated pricing required by the Waste Act is implemented for glass packaging. Eco-modulation encourages businesses to develop packaging that is better recyclable. Glass packaging fractions are grouped according to eco-modulation in the price classes.
- The pricing of consumer and B2B packaging is differentiated according to the “polluter-pays” principle.
- From July 2023 the producers are responsible for the costs of residential waste collection organised by municipalities for residences of at least five households and this increases the collection costs of consumer packaging. The pressure for price increases has remained moderate because of SPT’s own operations. There are some 2,7 million inhabitants covered by residential waste collection.

Comments on the price list for wood packaging

- Eco-modulation i.e. differentiated pricing required by the Waste Act is implemented for wood packaging. Eco-modulation encourages businesses to develop packaging that is better recyclable. Wood packaging fractions are grouped according to eco-modulation.
- There is no separate collection organised for consumer wood packaging because the volumes are extremely low.
- The recycling fees of wood packaging have been lowered because of SPT's own operations.

Comments on the price list for the light reporting model

- The Government Decree 1321/2022 stipulates that a producer organisation must allow for monitoring data to be provided in an alleviated form by such packaging producers that put on the market less than 50 tonnes of packaging a year.
- The price list does not differentiate between consumer and B2B packaging and it is based on volume weightings.

Late packaging data declaration fee (administrative fees)

According to the Terms of Contract the customer companies must declare annually to RINKI Ltd the packaging volumes and materials it has used to pack the products it has put on the market or imported with its products. The 2023 packaging data must be submitted by 29.2.2024.

It is essential for the operation of the producer responsibility system to submit the packaging data because it directly affects the funding and operation of the system and invoicing.

If 2023 packaging data is submitted after 29.2.2024, RINKI charges a late declaration fee.

- If data is submitted in March, the late declaration fee is 15% of the business service fee.
- If data is submitted in April, the late declaration fee is 30% of the business service fee.
- If data is submitted 1.5. or later, the late declaration fee is 50% of the business service fee.

Estimate-based invoice

If the company has not submitted the 2023 packaging data by the end of May 2024, RINKI Ltd invoices, in addition to the late declaration fee, also an estimate based-business service fee and recycling fees, based on the packaging data available to RINKI Ltd.
